WX Series Gas Heaters

SWIMMING POOL & SPA EQUIPMENT

- The fastest way to heat your pool or spa
- Electronic ignition eliminates pilot light
- Available with Genus IV remote thermostat
- Optional remote control from poolside or inside the home

WX Series

Gas Heaters

Gas Heating is the fastest and most economical way to heat your spa. The WX75 or WX120 provide a low-cost solution to the task of spa and pool heating along with a range of impressive features:

A HEATER TO SUIT YOUR NEEDS

Two models to ensure faster heating at the lowest possible cost. Use the charts opposite to determine the model which best suits your pool or spa.

ELECTRONIC TOUCH CONTROLS

The Genus IV touch control thermostat provides a host of intelligent features including:

- Optional Remote control from either poolside or in home
- Actual Temperature Display
- Desired Temperature Display
- Self-diagnostic monitoring and display to simplify maintenance and service
- Safety lock-out in the event of a logic failure
- Electronic ignition eliminates the need for a continuous pilot light, and saves on gas.

REMARKABLE EFFICIENCY

The all-copper finned tube heat exchanger accepts high flow rates which improves the heater efficiency and prevents scale formation in the waterways. This results in less maintenance needed and the attainability of a remarkable 83% efficiency meaning you will hardly notice a difference to your current gas bill when heating a 1600L spa.

MADE IN AUSTRALIA

Designed and built in Australia, HX heaters utilise BHP Colourbond steel and the powder coated external panels ensure it will perform efficiently and last longer in all weather conditions.

CHOOSING YOUR SPA HEATER

Determine your desired heat up time (e.g 1,2,3 hours) from the performance chart opposite. Next find your spa's capacity along the bottom line of the performance chart and follow up until it intersects the appropriate heater. This heater will provide a 20° temperature rise in the time you have selected*.

CHOOSING YOUR POOL HEATER

Determine the size of your pool area and the heat up time you prefer. A 24 hour heat up time is usual for a residential pool. The heater you select will provide a 12° rise in the time you have selected*.

*Heat up time will vary according to ambient temperature, weather conditions, location, wind and use of cover. For Larger pools and spas refer to Hurlcon MX range heaters.

COMPLEMENTARY PRODUCTS

VX Salt Chlorinator

QX Cartridge Filter

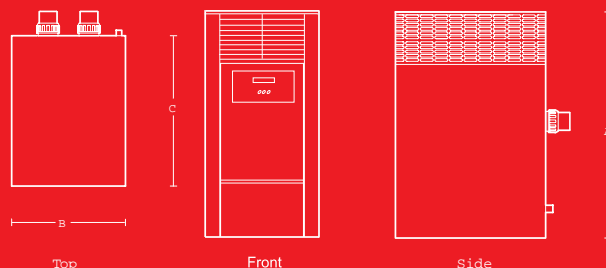

Genus IV Remote Control

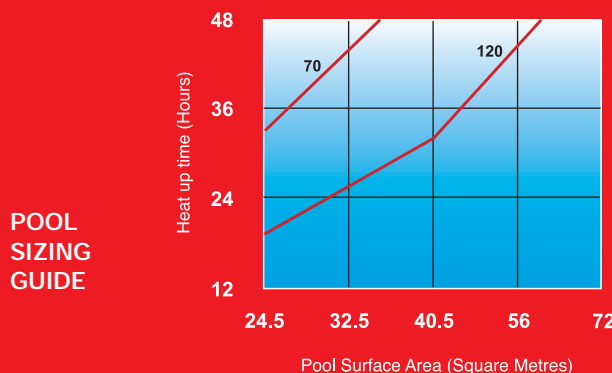

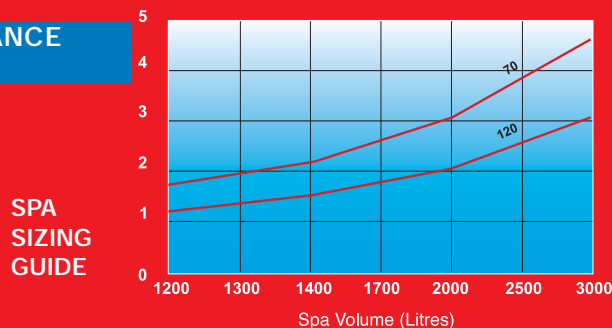

CX Pump
